## China SKA Regional Centre Prototyping

*Thursday, 19 September 2019 13:45 (30 minutes)*

China has been taking part in SKA pre-construction since the 1990's; 21cm and FAST both have some relationship with SKA. In past years, we had involved many packages including DISH/CSP/SDP. We are highly involved with the SKA Regional Center construction from 2015 onwards. In this presentation, I will look at the progress of China SKA Regional Centre Prototyping, including the building, hardware, network and also some initial results using this platform, and the future plan of SRC.
