

# Use of Robotic Telescopes for School Students

*Thursday, 4 September 2025 13:00 (45 minutes)*

I shall present, in workshop mode, a complete presentation of the use of Las Cumbres Observatory Telescopes for School students. This will involve planning of observations, processing of data, and analysis. For this, the analysis can be used using Virtual Observatory tools as well as Jupyter notebooks. Students can be taught both and depending on their coding skills, can be trained. This gives students the thrill of observations and a first hand experience of astronomy research.
