

Second Asia SKA Initiative On Neutron Star (ASIONS) meeting

Tuesday 29 January 2019 - Wednesday 30 January 2019

Kantary Hills, Chiang Mai

Scientific Programme

The keenly anticipated Square Kilometre Array (SKA) observations of Pulsars will be instrumental to perform strong field tests of gravity, to explore exciting and exotic neutron star astrophysics and to detect sub-micro Hertz gravitational waves during the coming decades. Therefore, these topics are being actively pursued by the Pulsar and Neutron Star science working group that include many Asian researchers.

The main objective of the current meeting is to strengthen the on-going nascent collaborations on the SKA era relevant projects on various aspects of Neutron Stars. This meeting is expected to strengthen further collaborations and discussions Initiated during the 'First ASIONS Meeting' held in Goa, India in 2016.
